

## Are your customers asking for structural fiberboard sheathing that is no longer available?

**It's no wonder as fiberboard is a proven performer offering many great benefits:**

- **Meets National Codes**
- **High Perm Rating**  
Let's wall breathe better than OSB and plywood
- **Green**  
no formaldehyde glues like OSB and plywood
- **Sound Control**  
great sound-blocking capabilities
- **Energy Saving R-Value**  
double of OSB and Plywood
- **Price Stability**  
bid with confidence

## SOLUTION

### PREMIUM INSULATING SHEATHING from BLUE RIDGE FIBERBOARD

PREMIUM INSULATING SHEATHING is non-structural and less expensive than intermediate “structural” fiberboard sheathing and can be incorporated to meet most national building codes by installing corner bracing as shown.

Replace Intermediate “structural” fiberboard sheathing with a combination of PREMIUM INSULATING SHEATHING (non-structural) and corner bracing installed according to manufacturer's application instructions.

If local codes require OSB or plywood corner bracing, use PREMIUM INSULATING SHEATHING as a low cost/high benefit sheathing for the remainder of the wall.

Always check with local building code officials for compliance.
